Lab 04- Implement Virtual Networking Student lab manual

Task 6: Configure Azure DNS for external name resolution

17. From the Cloud Shell pane, run the following to test external name resolution of the **az104-04-vm1** DNS record set in the newly created DNS zone (replace the placeholder [Name server 1] with the name of **Name server 1** you noted earlier in this task and the [domain name] placeholder with the name of the DNS domain you created earlier in this task):

[Name server 1] - ns1-35.azure-dns.com.

[domain name] – devopsacademy.dev

18. Verify that the output of the command includes the public IP address of **az104-04-vm1**.

- The output of the command from exercise 17 it includes the public IP address of **az104-04-vm1**.

The IP address is: 52.136.125.65

Below is a screenshot of the **az104-04-vm1** and its public IP address.

Below is a print screen for the exercise 17 and 18 from Task 6.

PowerShell ∨   ○ ? ⚙ ↻ ⎘ {} ⎙

```
PS /home/ana> nslookup az104-04-vm1.devopsacademy.dev ns1-35.azure-dns.com.
Server:         ns1-35.azure-dns.com.
Address:        150.171.10.35#53

Name:    az104-04-vm1.devopsacademy.dev
Address: 52.136.125.65

PS /home/ana>
```
